Hurco® Retrofits

Automec recently introduced a retrofit kit for old Hurco® systems. These upgrades consist of a new CNC150 control and cables, a servo amplifier to drive the Hurco® backgauge motor and a new Automec encoder. The customer retains his Hurco® motor which is usually in pretty good shape.

Close-up of Automec motor/encoder upgrade on an old S4 Autobend®

So far we have performed upgrades on the Autobend® 4, 5, 5C and 7 controls using the S4, S6 and S7 back-gauges. We have not attempted the S8 dual drive systems yet.

Presently we have been taking the Hurco® mechanical backgauge into our facility to perform the upgrade, but soon we hope to refine the retrofit kit to the point where the whole upgrade can be performed in the field.

Single axis upgrades are priced at \$4,950.00 and 2-axis are priced at \$8,850.00.

Automec CNC150 control adapted to an old-style Hurco® pendant

Check with us for some very satisfied customer references. Click on UPGRADES on our home page at www.automec.com to get more information about the upgrade program.
